

STONE UNIVERSE INC. NATURAL STONE

"Customers are the most important visitors on our premises. They are not dependent on us, we are dependent on them. They are not an interruption in our work, they are the purpose of it. They are not an outsider in our business, they are the part of it. We are not doing them the favor by serving them, they are doing us a favor by giving us the opportunity to do so."

ABOUT STONE UNIVERSE

Stone Universe Inc. is one of the biggest natural stone wholesalers in the United States. Our journey began in 1999 as a wholesale distributor of natural stones in Gilroy, California. Shortly, began the expansion of natural stone products with a focus on hardscaping. Over the years, we added a number of products like flagstones, pool coping, wall caps, column caps, driveway pavers, etc. in a wide variety of colors and finishes to meet the standards of the industry.

All the products until this point were imported from India. In 2010, we took a step further by introducing products from China. The increasing demand for products and the growth of the company stipulated the need for a bigger facility. In 2012, Stone Universe moved to a bigger location in San Lorenzo, California and this year also marked the introduction of travertine products from Turkey. While the product lines increased steadily, to facilitate the distribution of products throughout the country, Stone Universe established distribution centers in different parts of the country. Apart from corporate location, four other distribution centers were established in a span of three years with a steady growth.

We offer a wide range of products - pool coping, column caps, wall caps, pavers patterns in different sizes and finish, treads, driveway pavers, cobblestone, flagstone, ledge stones, slabs, etc. which is ideal for both indoor and outdoor applications for projects of various sizes. Every year we introduce new products.

ETHICS & SUSTAINABILITY POLICY STATEMENT

Imported natural stone are not only beautiful, it is a cost-effective choice for your dream project. When choosing an imported natural stone, it is important to choose a company that adheres to the Ethical Trading Initiative (ETI). Stone Universe cares deeply about this initiative and the ethical sourcing of all the material. Stone Universe Inc. has developed strict policies and guidelines to ensure that all our stone products are harvested and fabricated in environmentally sustainable ways, and that our stone is ethically produced.

We expect everyone we do business with - from our suppliers to retailers - to be responsible and proud of the safe working conditions provided by the Global Trade Initiative and Human Rights Standard.

DISCLAIMER

Variations in color, texture, veining, clefting, etc. is an aspect of natural stones & should not be considered as flaws. Natural Stones are composed of minerals which makes it susceptible to various chemicals & harsh environments. Exposure to elements like sun, rain, snow, etc. over a period of time can affect the look of natural stones. Some of the most common effects include oxidation (or rusting), flaking, weathering, etc. We strongly discourage the use of acidic cleaners and suggest seeking professional help if necessary. It is recommended to seal natural stones periodically to reduce environmental effects.

All our products have dimensional tolerances which are an industry standard. Further, we recommend using the standard installation process and sealers recommended by the American National Standards Institute(ANSI) for natural stones as the processes vary from installer to installer. It is extremely significant to inspect the material before fabrication or installation as we do not take any liability once the product is altered or installed.

NATURAL STONE
DISCLAIMER

Why Natural Stones?

ENDURANCE

Natural stones are one of the oldest building materials in existence. The use of natural stones can be traced back to the great pyramids of Egypt, the streets of ancient Rome, architectural buildings like the Colosseum, etc. with regular maintenance and care, natural stones have the potential to last literally for decades.

UNIQUENESS

Natural stone encompasses a wide variety of materials like Limestone, Sandstone, Slate, etc. each with its own unique properties, color, and texture. The presence of impurities gives inimitable color variation in every piece of stone with a rich textured appearance. Every piece of stone is unique yet maintains a comprehensive overall appearance.

AGING

One advantage of using natural stone is the character of the natural stone changes with age as the stone wears, fades and matures. The weathering effect that occurs with years of use is often considered attractive. Weathering can also be prevented by periodic application of stone sealers on a regular basis.

ECO-FRIENDLY

Natural Stone is an organic product quarried from the earth and is available in abundance. Natural stone does not contain any harmful chemicals and ensures a safer environment. Further, natural stones can be salvaged, reused, and recycled.

EASE OF MAINTENANCE

With the use of recommended cleaners and sealing the stone on a regular basis, makes it relatively easy to clean. With little care and precautions, the natural beauty of the stone can be preserved.

The above-mentioned advantages of natural stone make it a popular choice of material for construction and architectural purposes.
